Nigeria Health Intelligence Report

Monthly Health Intelligence Brief October 2026

This month

Ebola reaches Abuja as ₦98.7bn of primary-care funds awaits disbursement

Photo: Nigeria Health Watch, Kano field training

An imported Ebola case tested detection in private facilities. Meanwhile, ₦98.7 billion of the ₦422.3 billion released to the Basic Health Care Provision Fund since 2019 had yet to reach the gateways that pay facilities.

Inside

Where October's commitments stand, from announcement to results	2
₦98.7 billion released to the BHCPF has yet to reach the gateways	4
Nine days from first facility visit to Ebola confirmation	9

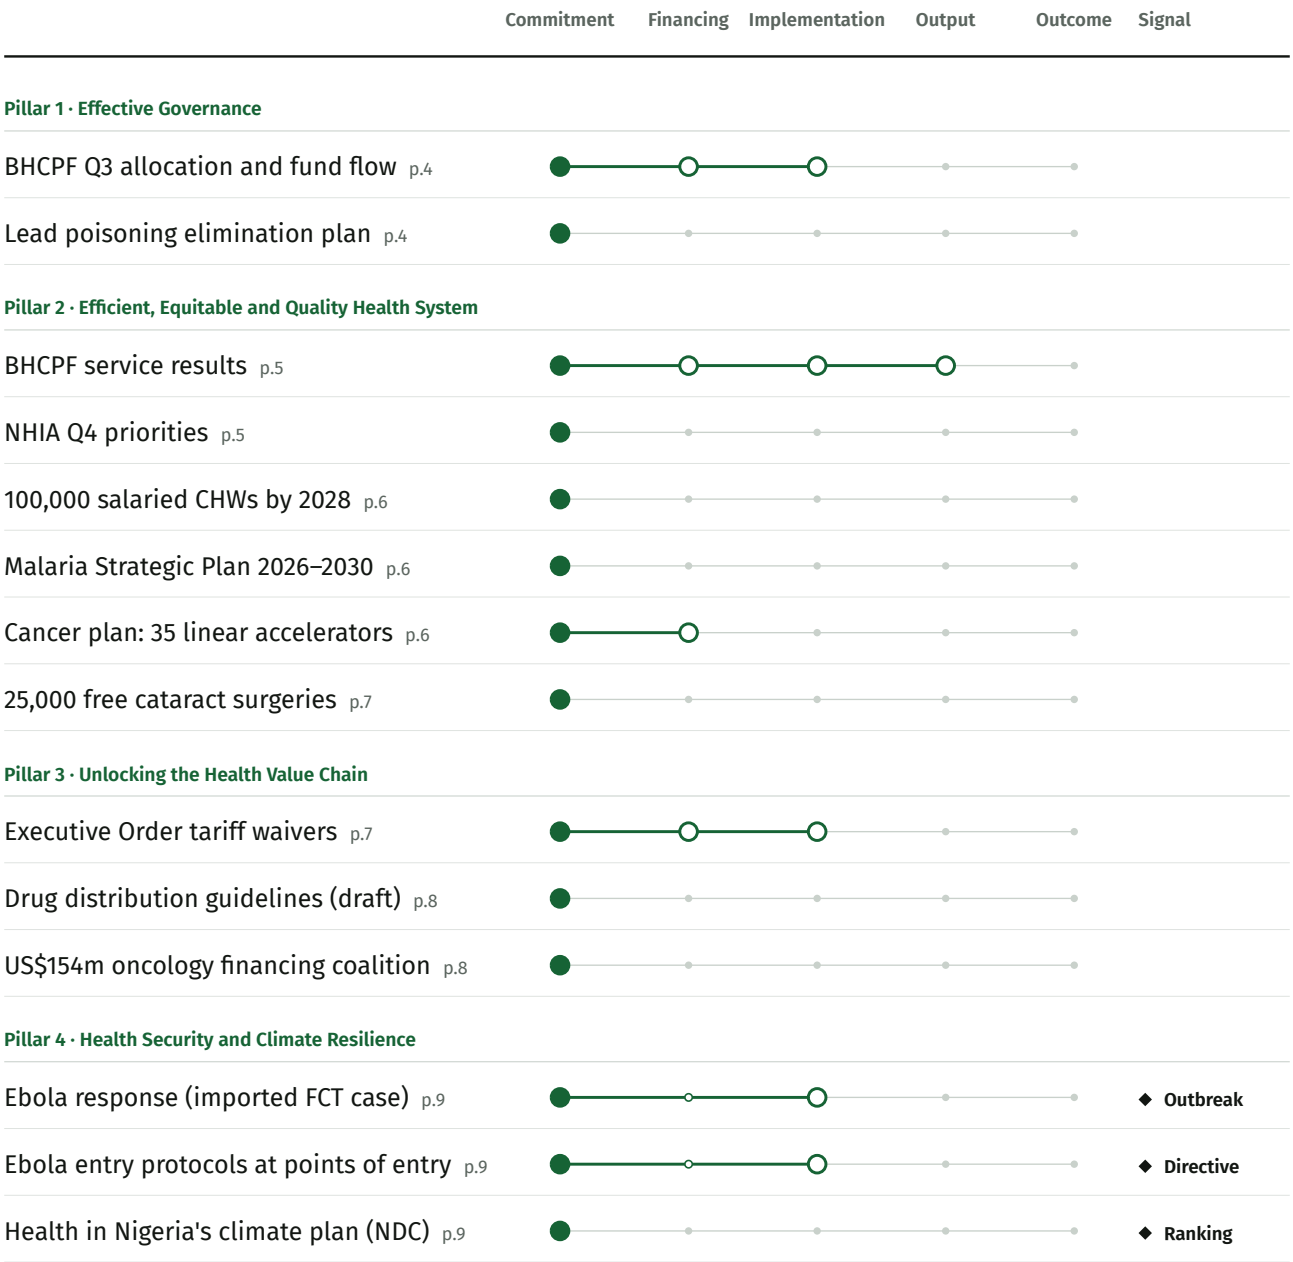
Reporting period 1–31 October 2026

NIGERIA HEALTH WATCH
Informed commentary, intelligence and insights on the Nigerian health sector

Where things stand

October's commitments on the ladder

Each development is placed by how far it has travelled, from announcement to measured results. A solid dot is independently evidenced; a ring is reported by government only. ◆ marks the event or assessment behind a response.



Commitment
Announced, launched or approved in principle.

Financing
Money allocated, approved or released.

Implementation
Delivery under way: systems, procurement, rollout.

Output
Services or products delivered and counted.

Outcome
Measured change in health, access or protection.

The month in brief

What mattered in October 2026

October was dominated by health security. The Federal Government confirmed an imported case of Ebola Virus Disease in the FCT, activated its incident management system and, within days, reported genomic results and tightened enforcement of entry protocols at points of entry. Primary healthcare financing was the other major theme: the BHCPF Ministerial Oversight Committee approved a larger quarterly allocation, and government published three years of BHCPF results while seeking to double the Fund's statutory share. Nigeria also hosted the launch of a continental community health workforce plan, PVAC reported the first figures on tariff waivers for local manufacturers, and national plans on malaria, cancer, eye health and lead poisoning were launched or restated. The common test for these plans is whether they come with costed, time-bound implementation and public reporting.

P1 **Implementation** · reported

The BHCPF Ministerial Oversight Committee approved ₦40.76 billion for Q3 2026; government is seeking to raise the Fund's statutory share from 1% to 2% of the Consolidated Revenue Fund. p.4

P1 **Commitment**

FMoHSW unveiled a Five-Year Strategic Plan on Lead Poisoning Elimination; its costed three-year roadmap is still being developed. p.4

P2 **Output** · reported

BHCPF reported a nearly 25% rise in PHC attendance since 2023. Official figures on health workers trained do not agree: 78,054 towards a 120,000 target (Minister of State, 28 Oct), more than 120,000 already retrained (FMoHSW, 14 Sept), and 120,000 as a goal for 2028 (Vice President, 30 Oct). p.5

P2 **Commitment**

Nigeria hosted the launch of Africa's Community Health Continental Acceleration Plan and restated a target of 100,000 salaried community health workers by 2028. p.6

P2 **Commitment**

The 2025 Malaria Indicator Survey report and the National Malaria Strategic Plan 2026–2030 were launched, targeting a 50% reduction in prevalence and deaths by 2030. p.6

P2 **Financing** · reported

Government restated the National Cancer Control Plan 2026–2030, including 35 linear accelerators, and set a target of 25,000 free cataract surgeries by 2027. p.6

P3 **Implementation** · reported

PVAC reported ₦380 billion in imports and about ₦23 billion in duties waived under the Executive Order for health manufacturers. p.7

P3 **Commitment**

Draft National Drug Distribution Guidelines set a target of at least 70% local sourcing in public health facilities by 2030. p.8

P4 **Implementation** · reported
◆ **Outbreak**

An imported Ebola case was confirmed in the FCT on 20 October, with 44 contacts identified; genomic analysis linked the virus to a case in Kenya. p.9

P4 **Implementation** · reported
◆ **Directive**

FMoHSW issued a circular requiring strict compliance with Ebola entry protocols after ONSA reported non-compliance at points of entry. p.9

P4 **Commitment**
◆ **Ranking**

Nigeria ranked first in Africa and second globally in the 2026 Healthy NDC Scorecards for health in national climate plans. p.9

The common accountability question across these developments is whether new policies, partnerships and operational platforms generate measurable changes in access, quality, safety and system performance. That question guides the "What to watch" notes throughout this brief.

Pillar 1 of 4

Effective Governance

1

Implementation · reported

BHCPF Q3 allocation rises as fund-flow delays come under review[1,11]

The BHCPF Ministerial Oversight Committee approved ₦40.76 billion for Q3 2026 — about ₦7.88 billion more than the previous quarter's ₦32.88 billion — split across the NHIA (48.75%), NPHCDA (45%), NEMSAS (5%) and NCDC (1.25%) gateways.

That increase sits inside a bigger number worth holding onto. At a ministerial briefing on three years of BHCPF, the Minister of State reported that of the ₦422.3 billion released into the Fund since 2019, ₦323.6 billion had been disbursed as of September 2026 — the ₦98.7 billion gap behind this month's cover headline. Releases themselves have grown fast, from ₦51.6 billion in 2023 to ₦132.2 billion in January–September 2026 alone, which is why the disbursement gap, not the release total, is the number to watch.

Government is pressing on two fronts to close it: working with the National Assembly to raise the Fund's statutory share from 1% to 2% of the Consolidated Revenue Fund, and extending direct facility financing to at least 17,600 facilities, up from 8,309 today and an approved 13,521. The Committee also set up a subcommittee on fund-flow bottlenecks, due to report within six weeks, and formalised its collaboration with ICPC through a new Memorandum of Understanding.

Why it matters Releases into the Fund have more than doubled, but about ₦98.7 billion released since 2019 had not been disbursed as of September. That gap, together with the new subcommittee, shows that moving money to facilities, not only raising allocations, is the binding constraint.

What to watch Publication of the subcommittee's findings (expected around late November), progress on the statutory amendment, timelines and costing for the facility expansion, and the assessment framework under the ICPC MoU.

2

Commitment

Five-year plan to eliminate lead poisoning unveiled[2]

At the 2026 International Lead Poisoning Prevention Week, the Minister of State unveiled a Five-Year Strategic Plan to eliminate lead poisoning in Nigeria — covering surveillance of environmental and occupational exposure, laboratory capacity, regulation and enforcement, and referral pathways for people with elevated blood lead levels. An Inter-Agency Working Group is now in place, a costed three-year roadmap is being developed, and Lagos, Ogun, Sokoto and Zamfara have been named priority states for tailored action plans.

Why it matters Lead exposure is a preventable, multisectoral risk that falls hardest on children and pregnant women, and it depends on regulators and industries outside the health sector. The plan provides a coordination framework, but most of its implementing instruments are still to come.

What to watch Completion of the costed roadmap, finalisation of the Lagos State action plan, and agreement on enforcement roles for the agencies regulating battery recycling, artisanal mining and lead-containing products.

Pillar 2 of 4

Efficient, Equitable and Quality Health System

1

Output · reported

BHCPF reports three years of service-delivery results[12]

Government reported that PHC attendance has risen by nearly 25% since 2023 — from 34.55 million visits to 43.06 million by Q2 2026 — and that the number of facilities meeting Level 2 readiness standards has nearly doubled, from 1,748 in 2024 to 3,202.

The gains extend into maternal care and insurance: skilled-birth-attendant deliveries are up 63.6%, and national health insurance enrolment has grown from about 16.2 million in 2023 to 23.06 million by Q2 2026. Coverage of vulnerable Nigerians through the BHCPF–NHIA gateway reached 3.18 million by Q3 2026. Rural emergency transport now reaches 171 of the 172 MAMII LGAs, with 168,571 ambulance episodes recorded since 2022.

On the workforce side, the release reports 78,054 frontline health workers trained towards a 120,000 target, and the Committee approved phased salary support for 13,800 community-based health workers and skilled birth attendants — fully federally funded in year one, tapering to 67% and then 33% before states take over.

Why it matters This is the most comprehensive set of BHCPF results the Ministry has published, covering service use, facility readiness and coverage. The figures are drawn from government administrative reporting rather than independent surveys.

What to watch Official training figures do not match. This release reports 78,054 trained towards 120,000, while FMoHSW's 14 September MAMII release said more than 120,000 had already been retrained (see Accountability Watch). Clarifying whether these refer to the same programme and indicator would resolve the difference.

2

Commitment

NHIA sets Q4 priorities on enrolment, quality and complaints[14]

NHIA now covers more than 23 million enrollees, including 3.18 million through the BHCPF gateway and 96,068 beneficiaries of its maternal, neonatal and Fistula-Free interventions as of October, according to its Expanded Management Retreat. On patient experience, 82% of complaints were resolved within 48 hours in the first half of 2026.

Its Q4 priorities: scale BHCPF enrolment and accountability, expand coverage for vulnerable groups through the Global Fund, CEmONC and Fistula-Free programmes, standardise PHC service quality, and advance systems integration.

Why it matters Complaint resolution time is one of the few patient-experience measures NHIA has published. The focus on quality standards responds to the gap between enrolment and effective coverage flagged in earlier editions.

What to watch The volume and type of complaints behind the 82% figure, published quality indicators for accredited facilities, and an enrolment breakdown by scheme and active use.

3

Commitment

Continental community health workforce plan launched in Abuja[10,13]

Nigeria hosted the launch of Africa's Community Health Programme Continental Acceleration Plan 2026–2030 — a 51-country, 30-plus-partner push to employ two million community health workers across the continent by 2030. The Vice President, launching on behalf of the President (the African Union's Champion for Human Resources for Health), put Nigeria's own need at an estimated 315,000 community health workers by 2030, and restated existing targets: revitalising over 17,000 PHC centres, training 120,000 frontline health workers, and employing 100,000 salaried community health workers by the end of 2028.

Africa CDC estimated the continental target needs US$4.3 billion a year, and that the 2017 AU commitment is only just over half met.

Why it matters The Vice President called for legal recognition, reliable pay and equitable deployment of community health workers. Nigeria's commitment of 100,000 salaried posts is much larger than the 13,800 covered by the BHCPF salary-support arrangement approved this month, so how the rest will be financed is the central question.

What to watch A costed national plan for employing 100,000 salaried community health workers, its financing source, and state commitments to absorb the posts.

4

Commitment

Malaria survey report and 2026–2030 strategic plan launched[3]

Malaria parasite prevalence among children aged 6–59 months has fallen from 22% in 2021 to 15.2% in 2025 — with Kebbi State alone dropping from 49% to 18% — according to the newly launched 2025 Nigeria Malaria Indicator Survey. The accompanying National Malaria Strategic Plan 2026–2030 targets a further 50% reduction in prevalence and malaria deaths by 2030, using Sub-National Tailoring to direct interventions to the highest-burden areas.

One gap the numbers expose: net ownership doesn't guarantee net use. In net-owning households, 72.3% of children and 80.6% of pregnant women actually slept under one.

Why it matters The plan's Sub-National Tailoring approach matches the subnational targeting the August brief called for. The net-use gap means behaviour change and replacement campaigns remain as important as distribution.

What to watch Publication of the full NMIS report and state results, the plan's costing and financing gap, and whether Perennial Malaria Chemoprevention scale-up is set out as part of Sub-National Tailoring.

5

Financing · reported

National Cancer Control Plan restated at International Cancer Week[4]

Opening the 2026 International Cancer Week, the Minister of State highlighted Nigeria's ambition to reduce the cancer burden by at least 30% by 2030, as outlined in the costed National Cancer Control Plan 2026–2030. Key interventions include cancer centres of excellence; the approved procurement of 35 linear accelerators over the next three years; eight NICRAT preventive oncology clinics; and HPV vaccination, which has reached more than 18 million girls aged 9–14. He also pointed to stronger financial protection for cancer patients through the National Cancer Health Fund.

Why it matters These commitments build on the cancer-centre and radiotherapy developments reported in August. The 35 linear accelerators would be a significant expansion in radiotherapy capacity, but they are approved for procurement over three years, not yet installed.

What to watch Procurement and installation schedules for the linear accelerators by site, staffing and maintenance plans, and how progress against the 30% burden-reduction target will be measured and reported.

6

Commitment

Target of 25,000 free cataract surgeries by 2027[5]

At the 2026 World Sight Day commemoration, FMoHSW set a target of 25,000 free cataract surgeries by the end of 2027 under the Renewed Hope Health Connect initiative. The Ministry reported that over 3,000 health workers had been trained across 16 states, over 1,400 PHC centres activated for primary eye care, over 1.5 million pairs of reading spectacles distributed and over 1.5 million school-age children screened. Four new vision centres are being established in Enugu, Edo, Sokoto and Nasarawa.

Why it matters Integrating eye care into PHC brings screening closer to communities, and cataract surgery is one of the most cost-effective interventions for avoidable blindness. The target is a commitment; the number of surgeries completed so far was not reported.

What to watch A baseline and periodic count of surgeries completed, their distribution by state, and post-operative outcome monitoring.

Pillar 3 of 4

Unlocking the Health Value Chain

1

Implementation · reported

Executive Order tariff waivers reach about ₦23 billion[15]

PVAC reported the first public figures on the uptake and fiscal cost of the Executive Order that exempts eligible health manufacturers' production inputs from import duty and tariffs: ₦380 billion of imports have moved through the scheme, with about ₦23 billion in import taxes waived. The figures were presented at the PMG-MAN Supply Chain Conference 2026 in Lagos, drawing on 2025–2026 import data that showed volumes and values rising each quarter. The Order was signed in June 2024 and has been applied by the Nigeria Customs Service since March 2025. Manufacturers reported lower prices, greater competitiveness and expanded capacity, and beneficiaries have been asked to submit quarterly import returns to PVAC to inform a mid-term evaluation.

Why it matters In September, government said 87 manufacturers were benefiting. The reported price and capacity gains are self-reported by manufacturers and have not yet been evaluated.

What to watch Publication of the mid-term evaluation, comparing the duties waived with changes in local output, product prices and employment.

2

Commitment

Draft drug distribution guidelines set a 70% local-sourcing target[16]

Stakeholders validated the draft 3rd Edition of the National Drug Distribution Guidelines at a meeting in Akwanga, Nasarawa State, on 21–23 September, setting a target of at least 70% local sourcing in public health facilities by 2030. The draft also strengthens the role of local manufacturing, adds new accountability measures, and defines a formal role for Medipool, the national pooled procurement platform. Participants included FMoHSW, NAFDAC, the Pharmacy Council of Nigeria, the Pharmaceutical Society of Nigeria, state Drug Management Agencies, Medipool and WHO. The guidelines now go to FMoHSW leadership for final approval.

Why it matters A sourcing target in the rules governing public procurement creates demand for locally made products, complementing the supply-side incentives of the Executive Order. Until it is approved, the target remains a draft.

What to watch Final approval of the guidelines, how state Drug Management Agencies will monitor compliance, and alignment with the 70% local-production target for essential health products restated in September.

3

Commitment

Oncology financing coalition highlighted[6]

NHIA highlighted a US$154 million coalition between NHIA, the Nigeria Sovereign Investment Authority, the International Finance Corporation and Roche, in a co-authored article on financing cancer care. The model combines de-risked investment in oncology infrastructure with risk pooling through health insurance, with the aim of making advanced diagnostics and treatment more available and affordable.

Why it matters The coalition pairs capital investment with demand-side financing, which addresses a common failure where equipment is installed but patients cannot afford to use it. The source is a co-authored opinion article, however, and did not state how much of the US$154 million has been committed or deployed, or on what timeline.

What to watch The coalition's investment schedule, the facilities and services it will finance, and how NHIA coverage of oncology services will be priced and sustained.

Value-chain note No new local-manufacturing milestone was identified in the October source set reviewed for this brief. FMoHSW's 30 September post on the 8th Nigeria Pharma Manufacturers Expo, including PVAC's reported US$2 billion in commitments, was covered in the September edition.

Pillar 4 of 4

Health Security and Climate Resilience

1

Imported Ebola Virus Disease case confirmed in the FCT[7,8]

Implementation · reported

◆ **Outbreak**

The Federal Government confirmed one imported case of Ebola Virus Disease in the FCT on 20 October. The patient, a woman who had arrived from Uganda, developed symptoms on 7 October and attended a private health facility on 11 October before laboratory confirmation. She is in isolation and was reported to be stable. Forty-four (44) contacts, including health workers, patients, caregivers and travel contacts, were identified for monitoring, and the incident management system was activated. On 23 October, government reported that genomic analysis by NCDC and the Institute of Genomics and Global Health at Redeemer's University showed the virus to be genetically related to a virus identified in a case in Kenya; it stressed that this does not, by itself, establish a transmission link. NCDC began daily public updates from 24 October.

Why it matters Government referred to Nigeria's 2014 response to an imported case in Lagos as a reference point. The speed of the genomic analysis shows gains in laboratory capacity. The nine days between the patient's first facility visit and confirmation, however, point to the detection gap in private facilities identified in the September edition.

What to watch Daily NCDC reporting of contacts under follow-up, test results and any secondary cases; the 21-day monitoring endpoint; infection prevention and control support to the private facility involved; and a review of how the case was detected.

2

Ebola entry protocols tightened after reported non-compliance[9]

Implementation · reported

◆ **Directive**

FMoHSW issued Circular No. PS/FMOH/08/VIII/48, dated 22 October, directing MDAs and health institutions to ensure strict compliance with approved Ebola entry protocols at all designated points of entry. The directive followed concerns raised by the Office of the National Security Adviser about reported non-compliance. Institutions must enforce screening, health declarations and surveillance, document and report breaches, and allow enforcement officials to work without interference.

Why it matters The circular indicates that protocols were in place but inconsistently applied, a gap that matters most during an active importation risk. Its emphasis on reporting breaches creates a basis for accountability.

What to watch The points of entry and types of breach involved, the monitoring mechanism institutions are required to set up, and whether compliance data are reported.

3

Nigeria ranks first in Africa on health in climate plans[17]

Commitment

◆ **Ranking**

The SWAp Coordination Office reported that Nigeria scored 25 out of 32 in the 2026 Healthy NDC Scorecards published by the Global Climate and Health Alliance, ranking first in Africa and second globally among 132 countries assessed. GCHA described Nigeria's climate ambition as fully in line with its fair share of emissions reductions under the Paris Agreement. The work was credited to the Climate in Health Desk at FMoHSW.

Why it matters	This is the first climate-and-health development in this brief series; the August and September editions identified none. The scorecard grades how well health is integrated into Nigeria's climate plan, not implementation; the post itself noted continuing exposure from generator use, gas flaring and household cooking smoke.
What to watch	Implementation milestones under the Health National Adaptation Plan 2025–2030, including climate-resilient PHC facility upgrades, and financing secured for health adaptation.

Accountability watch

What remains unclear

The questions below identify information that was not located in the public sources reviewed for this edition. They are framed as accountability questions rather than claims that the information does not exist.

Issue	What remains unclear	Question to watch
Ebola detection	Nine days passed between the first private facility visit (11 October) and confirmation (20 October); the reasons were not set out.	Will a review of the detection pathway be conducted, and its lessons shared with private facilities?
Ebola contacts	Some contacts tested negative, and others were pending as of 23 October; complete figures were not published in the sources reviewed.	Will daily updates report contacts under follow-up, results, and completion of 21-day monitoring?
Entry protocols	ONSA reported non-compliance, but the points of entry and nature of the breaches were not disclosed.	What breaches occurred, and what corrective action has been taken?
BHCPF disbursement	About ₦98.7 billion released since 2019 had not been disbursed as of September; publication of the fund-flow subcommittee's findings was not committed.	Will the findings, and a timeline for clearing undisbursed funds, be made public?
Health workers trained	Figures do not match: The Minister of State reported 78,054 frontline health workers trained towards 120,000 (28 Oct). FMoHSW's 14 September MAMII release said more than 120,000 had already been retrained, and the Vice President, on 30 October, presented 120,000 as a goal for 2028.	Which figure is current, and do the releases refer to the same programme?
Salaried community health workers	A 100,000-post target by 2028 was restated; the BHCPF arrangement covers 13,800 posts.	How will the remaining posts be financed, and when will states absorb them?
Executive Order waivers	₦23 billion in duties waived is reported, but effects on prices and local output are self-reported.	When will PVAC's mid-term evaluation be published?
Linear accelerators	Procurement of 35 machines is approved over three years; sites and schedule were not specified.	Which centres will receive them, and when will they be operational?
Oncology financing coalition	The US$154 million figure was reported without commitment or deployment status.	How much has been committed and deployed, and for which facilities?

Carried forward

The ledger

This table revisits accountability questions from the August and September editions. The absence of an update means only that none was located in the October sources reviewed.

Earlier item	Months open	October status	Question carried forward
BHCPF–ICPC oversight Logged Aug 2026	2	Moved Collaboration has been formalised through an MoU, and a fund-flow subcommittee was set up.	The assessment framework and findings remain unpublished.
Malaria / PMC plan Logged Aug 2026	2	Moved National Malaria Strategic Plan 2026–2030 launched with Sub-National Tailoring.	Is PMC scale-up costed within the plan?
NHIA enrolment by scheme Logged Sep 2026	1	Moved Enrolment reported at 23.06 million by Q2 2026; coverage through the BHCPF gateway reached 3.18 million by Q3 2026.	A breakdown for other schemes and active use is still unpublished.
PVAC US$2 billion Logged Sep 2026	1	Open About ₦23 billion in Executive Order waivers reported; no disbursement data on the US$2 billion.	Carried forward to the November edition.
MAMII results framework Logged Sep 2026	1	Open Rural emergency transport reported in 171 of 172 MAMII LGAs; no single results framework published.	Will baselines and targets be reconciled and published?
Private-sector surveillance Logged Sep 2026	1	Open No pilot update identified; the Ebola case was first seen at a private facility.	Will the SORMAS pilot be accelerated in light of the outbreak?
Attempted-suicide reform; NHTDAO; work-hours framework; diphtheria updates Logged Aug–Sep 2026	1–2	Open No public update was identified in the October source set.	Carried forward to the November edition.

Months open counts editions since the item was first logged. Moved = some progress reported this month; Open = no update located.

Turning insight into action

Priority actions for the next reporting cycle

1 **NCDC and the Presidential Task Force on EVD**	Maintain daily updates with contact follow-up and test results, and publish an after-action review of how the case was detected, including the role of private facilities.
2 **FMoHSW and port health services**	Report compliance with Ebola entry protocols by point of entry, including breaches identified and corrective actions taken.
3 **BHCPF Ministerial Oversight Committee**	Publish the fund-flow subcommittee's findings and a timeline and costing for expansion to at least 17,600 facilities.
4 **FMoHSW and NPHCDA**	Reconcile and publish a single figure for frontline health workers trained, and a costed plan for 100,000 salaried community health workers.
5 **FMoHSW and the Inter-Agency Working Group on lead**	Publish the costed three-year roadmap with named agency responsibilities for enforcement.
6 **NMEP and NPC**	Publish the full 2025 NMIS report with state-level results, together with the costing of the National Malaria Strategic Plan 2026–2030.
7 **FMoHSW and NICRAT**	Publish the site-by-site procurement and installation schedule for the 35 linear accelerators.
8 **PVAC**	Publish the Executive Order mid-term evaluation, and set out the approval timeline for the National Drug Distribution Guidelines.
9 **FMoHSW Climate in Health Desk**	Set out implementation milestones and financing for the Health National Adaptation Plan 2025–2030.

Next edition

The November brief will track the Ebola response through the end of contact monitoring, the BHCPF fund-flow subcommittee report, JAR 2026 (9–12 November), the 67th National Council on Health (16–20 November) and preparations for the AMR Ministerial Conference in December.

About this brief

About and method

About Nigeria Health Watch and this brief

Nigeria Health Watch is a not-for-profit health communication and advocacy organisation that advances access to quality healthcare through evidence, informed commentary, public engagement and accountability. Since 2007, the organisation has tracked health policy and implementation, supported public dialogue and produced evidence to strengthen health-system decision-making.

The Monthly Health Intelligence Brief is the rapid-cycle companion to Nigeria Health Watch's biannual Nigeria Health Intelligence Report. It is designed to identify important monthly developments, distinguish announcements from implementation, surface questions that remain unresolved and provide a short set of actions for policymakers, institutions, civil society and partners.

How to read this brief

Each item separates the development itself from why it matters and what remains to be watched. A reported announcement is not treated as evidence of implementation or outcome unless supporting evidence is available.

Scope

This October 2026 edition covers developments identified between 1 and 31 October 2026. It is not an exhaustive record of all activity in Nigeria's health sector; it prioritises developments judged relevant to implementation, accountability, financing, service delivery, the health value chain and health security. Where possible, it also revisits commitments flagged in the August and September editions.

Methodology and source approach

The Monthly Health Intelligence Brief uses rapid evidence review and monitoring of official government and institutional communications, public reports, press releases, reputable media coverage and selected digital channels. Claims are attributed to their source and checked against a second source or the underlying programme document where one was available; otherwise they rest on the single source cited.

This monthly brief does not include the Expert Insight Interviews or Integrated Community Listening exercises used in the biannual Health Intelligence Report. Digital and social-media monitoring may be used to identify emerging signals or public discussion, but such content is not treated as representative of public opinion.

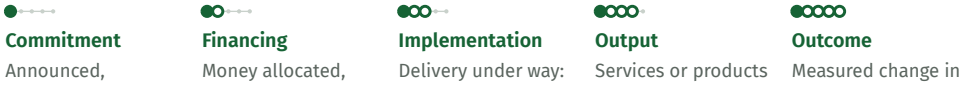
The analysis distinguishes between commitment, financing, implementation, service output and outcome. Where only an announcement or institutional statement is available, the brief reports it as such rather than treating it as independently verified implementation.

Data limitations

Monthly reporting is necessarily provisional. Figures may be revised as programme reports, survey documentation or audited data become available. Publicly reported figures are therefore described as reported or announced where independent verification is not available.

Sources are numbered throughout the brief and listed at the end. Primary government or institutional sources are preferred where available; reputable media or official social channels are used when they provide the only public record of the development.

Reading the ladder



Commitment	Financing	Implementation	Output	Outcome
Announced, launched or approved in principle.	Money allocated, approved or released.	Delivery under way: systems, procurement, rollout.	Services or products delivered and counted.	Measured change in health, access or protection.

A solid dot means the stage is independently evidenced (for example by a survey, audit or independent data); a ring means it is reported by government only. Commitment is always solid, because the announcement is its own evidence. A small open dot on the line marks a stage that does not apply, such as financing for a directive. ◆ marks the event or assessment behind a Pillar 4 response.
