

Get It Together for Infection Prevention

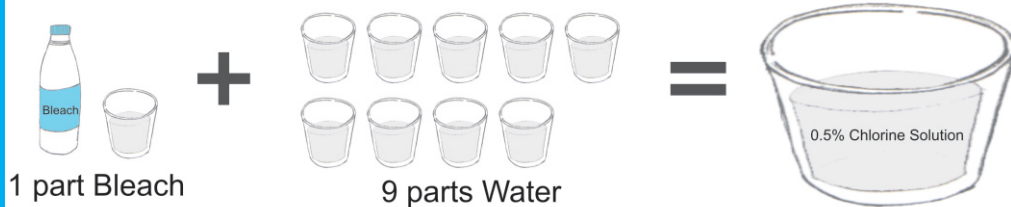

Why Disinfect?

To protect ourselves and our clients from infections

Where to Disinfect

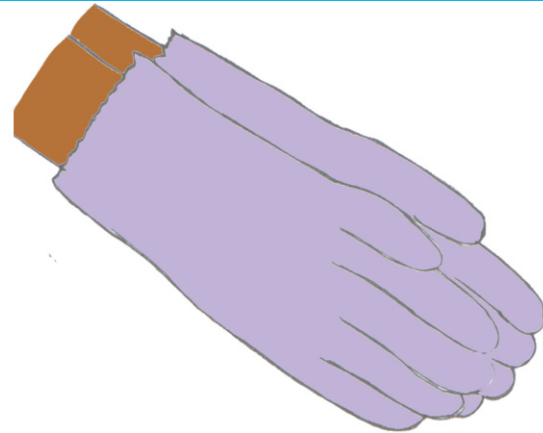

- Consulting rooms
- Operating rooms
- Dressing rooms
- Sampling rooms
- Minor surgery rooms
- Laboratories

How to Disinfect

The chlorine solution must be prepared only when you are ready to use it

Prepare 0.5% chlorine solution

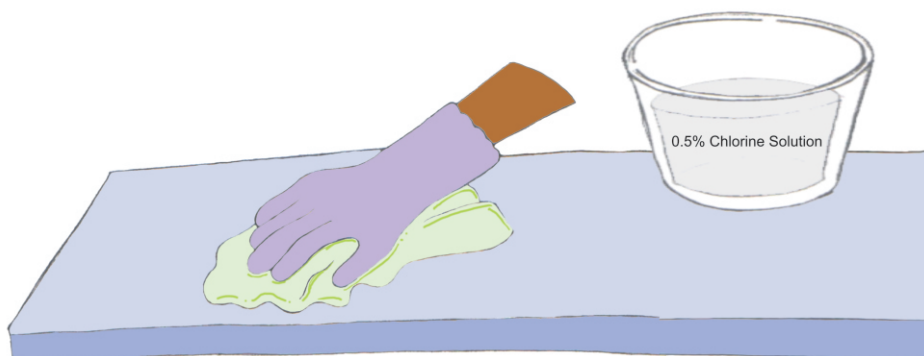

Wear gloves while cleaning instruments and equipment

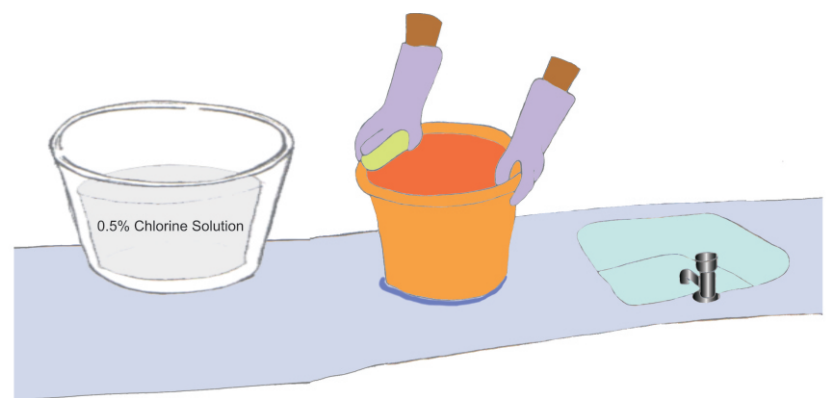

Wear protective eye-wear and plastic apron if available to protect from splashing

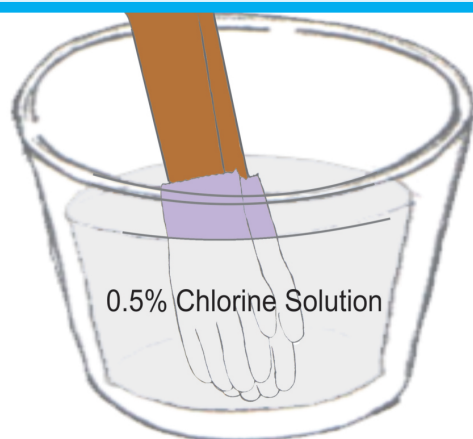

Soak instruments in the 0.5% chlorine solution for at least 10 minutes

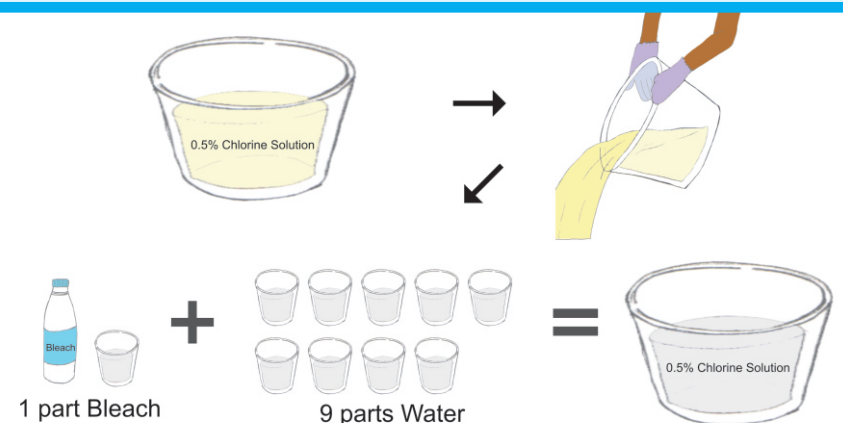

Wipe surfaces with a soft cloth soaked with 0.5% chlorine solution

Clean waste containers with the 0.5% chlorine solution and rinse thoroughly with water

Immerse gloved hands in the 0.5% chlorine solution before removing the gloves

Replace the 0.5% chlorine solution everyday or as soon as it becomes cloudy
